Coding Challenge Set: Strings & Tuples

Challenge 1: Student Name Formatting

A student database stores names in inconsistent formats.

Task

Convert all names to **proper case** (First letter capital).

📜 **Input**

students = ("sunitha", "RAVI", "aNu")

Challenge 2: Count Total Subjects

Each student has subjects stored in a tuple.

📜 **Input**

subjects = ("Math", "Science", "English", "Math", "Science")

Task

Find:

- Total subjects
- Unique subjects

Challenge 3: Remove Extra Spaces from Feedback

Student feedback contains unwanted spaces.

📜 **Input**

feedback = (" good course ", " excellent ", "average ")

Task

Clean all feedback strings

Challenge 4: Combine Student Name & Course

You have separate tuples for names and courses.

📜 **Input**

```
names = ("Anu", "Ravi", "John")
courses = ("Python", "SQL", "Power BI")
```

Task

Create a tuple:

('Anu-Python', 'Ravi-SQL', 'John-Power BI')

Challenge 5: Extract Email Domains

Student emails are stored in tuple.

📜 **Input**

```
emails = ("anu@gmail.com", "ravi@yahoo.com", "john@edu.com")
```

Task

Extract domains
