Coding Challenge : Built in Function Python

🔹 **Challenge 1: Flatten a Nested List**

Concepts: list comprehension

Problem:

nested = [[1, 2], [3, 4], [5]]

Expected Output:

[1, 2, 3, 4, 5]

🔹 **Challenge 2: Check Anagram**

Concepts: sorted()

Problem:
Check if two strings are anagrams.

s1 = "listen"
s2 = "silent"

Expected Output:

True

🔹 **Challenge 3: Find Missing Number**

Concepts: set()

Problem:

nums = [1, 2, 4, 5]

👉 **Expected Output:**

3

Hint:
Compare with full range using set difference.

🔹 Challenge 4: Group Words by First Letter

Concepts: dict, setdefault()

Problem:

words = ["apple", "ant", "banana", "bat"]

Expected Output:

{'a': ['apple', 'ant'], 'b': ['banana', 'bat']}

🔹 Challenge 5: Remove Empty Values

Concepts: dictionary comprehension

Problem:

data = {"a": 1, "b": None, "c": 3, "d": None}

Expected Output:

{'a': 1, 'c': 3}
