Coding Challenge (Strings Only) – Ola Defect Analysis

Scenario

You are a **Data Analyst at Ola**. You receive complaint data as a **single string**.
You must **clean and analyze it using ONLY string operations**.

Input (Single String)

data = "Ride101-Ramesh-Late Arrival-Bangalore, Ride102-Suresh-rude behavior-Hyderabad, Ride103-Mahesh-Late arrival-Bangalore"

Tasks (STRICTLY USING STRINGS)

- **Task 1: Clean the Data**
  - Convert entire string to lowercase
- **Task 2: Count Total Complaints**
  - Count how many rides (records) are present
- **Task 3: Count "Late Arrival" Issues**
  - Count how many times "late arrival" appears
- **Task 4: Find Complaints from Bangalore**
  - Count how many times "bangalore" appears
- **Task 5: Extract First Driver Name**
  - From first record → extract **driver name**
- **Task 6: Replace Issue Names (Standardization)**

- Replace all:
    - "rude behavior" → "rude_behavior"
    - "late arrival" → "late_arrival"
